

# Pick-up grapple

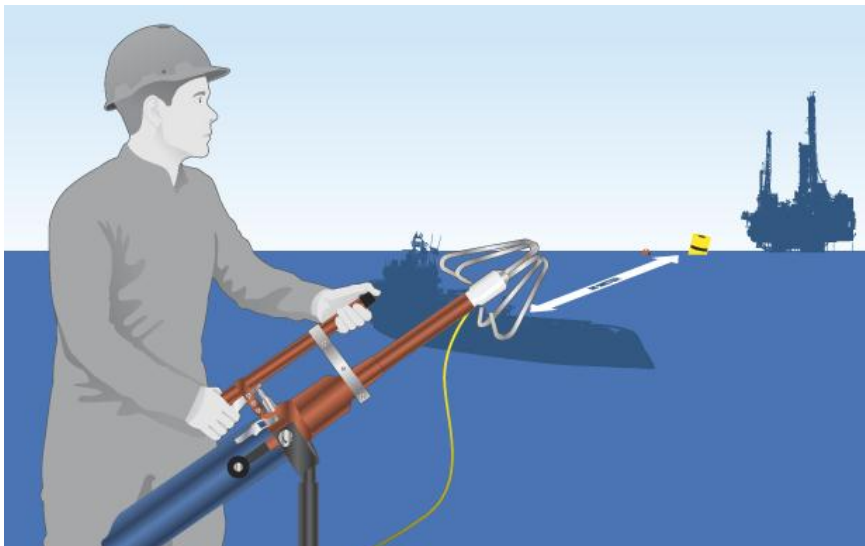

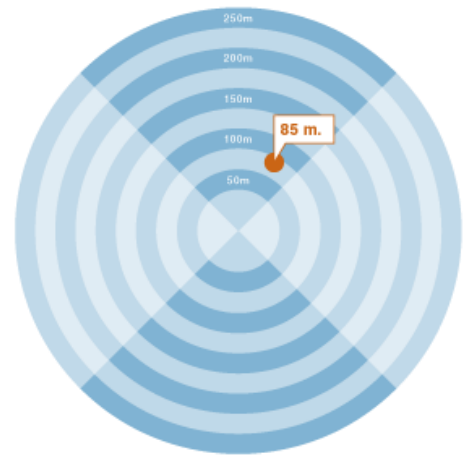

Made from Stainless Steel and plastic. Typical shooting range with a dry and clean line of 5mm is 85 meters.

## Article 7002 Pick-up grapple

1

This is a heavy duty hook for picking up ropes and lines in the sea. The closed ends secure the line within the barbs.

## Operations

The PLT is used by Anchor Handlers to safely and effectively grab the buoy softline on the buoy. This is done by having a secondary small buoy attached to the other end of the softline.

You can launch the Line Pick-up Grapple up to 80 meters from a safe and elevated spot on your vessel.

Typically used by AHTS, Seismic vessels or Stand by vessels.
